

Azure Connection Instructions

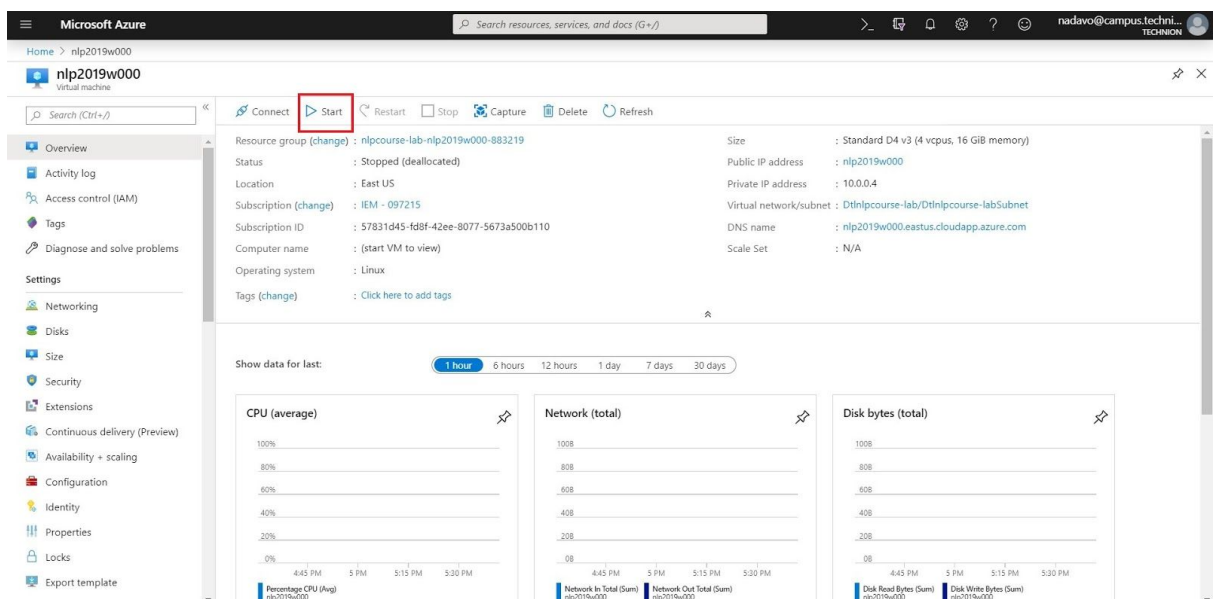

1. Go to <https://portal.azure.com> and login with your Technion credentials: email address and password.
2. On the Azure Home screen, click on “Virtual Machines”.

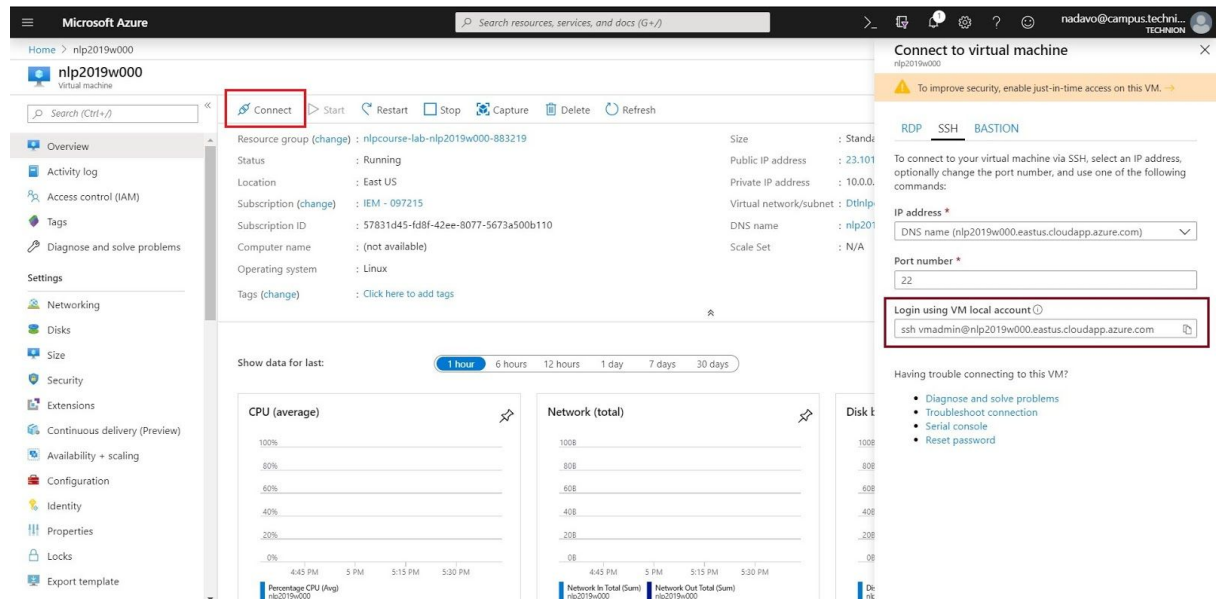

3. In the search box labeled “Filter by name...” enter the name of the virtual machine which is assigned to you ([see table](#)) and click on it.

4. In the desired machine screen, click on “Start” button to start your machine.

5. After the machine has successfully started, click on “Connect” button and copy the ssh command at the bottom of the right side window. The ssh command should look something like:
ssh student@<machine name>.<azure domain>.cloudapp.azure.com

6. Open a Terminal window (Mac/Linux) or use [PuTTY](#) (Windows), paste the ssh command in the command line and enter the password **Technion2019!** when prompted.

```
nadavo@NADAVS-XPS:~$ ssh student@nlp2019w000.eastus.cloudapp.azure.com
student@nlp2019w000.eastus.cloudapp.azure.com's password:
Welcome to Ubuntu 16.04.6 LTS (GNU/Linux 4.15.0-1063-azure x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:        https://ubuntu.com/advantage

 * Kata Containers are now fully integrated in Charmed Kubernetes 1.16!
   Yes, charms take the Krazy out of K8s Kata Kluster Konstruktion.

0 packages can be updated.
0 updates are security updates.

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

student@nlp2019w000:~$
```

7. After you are finished with your machine, you are not running any process and you want to shut it down, click on the “Stop” button.

8. Any machine which is idle and not running any processes will automatically shut down. You will see the following warning message:

```
[root@ir2019w-team ~]#  
Broadcast message from root@ir2019w-team (Tue Oct 22 15:55:49 2019):  
  
Your VM is idle and will shutdown. To cancel shutdown type: cancel_shutdown
```
